DULUX STEEL PRIMER

TECHNICAL DATA SHEET
Version 1 – 2015 JUNE
THIS ISSUE SUPERSEDES ALL PREVIOUS PUBLICATIONS

PRODUCT DESCRIPTION

Versatile corrosion resistant steel primer for use on new or lightly rusted iron and mild steel.

PRODUCT USES

- For application to correctly prepared new or lightly rusted iron or mild steel.
- Gives an excellent primed surface for most decorative Undercoats and Top coats.

FEATURES AND BENEFITS

- General-purpose high quality corrosion resistant primer.
- Good adhesion to substrate.
- Suitable for new or hand cleaned rusty surfaces.
- Non-drip, easy brushing with good flow and levelling properties.
- No added lead

DULUX STEEL PRIMER

APPLICATION INFORMATION

Mixing Stir until homogeneous with a flat paddle

Application Surface conditions Surface Temperature between 10 - 35°C Relative Humidity between 10 - 85 % OR 2°C above dew point minimum.

Application methods Brush, roller and spray

Brush application preferred to ensure wetting of the surface

Thinner Thinning not recommended. Ready for use after thorough stirring. Mineral Turpentine if required for spraying to maximum of 10%.

Drying Time Touch dry 4 hours at 23°C

Recoating Time 18 hours at 23°C (Recoating times will be extended during cold, wet or humid conditions)

Cleaning of equipment After use, remove as much product as possible, and then clean immediately with Mineral Turpentine or Dulux Brush Cleaner/Degreaser.

Substrates Suitably prepared mild steel and iron.

Coats Required Apply one or two coats Dulux Steel Primer, depending on the severity of the conditions. Two coats are preferred for coastal conditions and chemical works.

Top Coating Over-coat primer with one coat of Dulux Universal Undercoat, and finish with two coats of selected Dulux decorative topcoat

Precautions Do not apply during cold (below 10°C) or wet weather. Not designed to withstand natural weathering. Overcoat within one week particularly in a marine atmosphere. Not suitable for direct application to powdery or friable surfaces whether previously painted or not.

SURFACE PREPARATION

Ensure that surfaces are dry, sound and free from dust, dirt, grease and oil.

NEW SURFACES

Mild Steel and Iron

- Inspect shop-primer thoroughly for damage by installation. All rust, scale and dirt must be removed by scraping or with steel wire brushes, and then thoroughly sand with medium grit sandpaper and finish with fine grit sandpaper - down to a bright metal finish. Ensure that the sanded areas are dry and free of grease and dust. A solvent wash (rags dipped in lacquer thinner) may be used. Change the rags frequently. Allow drying.
DULUX STEEL PRIMER

SURFACE PREPARATION

- For best paint system performance follow primer with Dulux Universal Undercoat before applying the selected finishing coat.

PREVIOUSLY PAINTED SURFACES

- Sand enamel surfaces to provide a key and improve adhesion.
- Rust and flaking paint must be completely removed prior to spot-prime exposed substrate with Dulux Steel Primer. Build up spot-primed areas with Dulux Universal Undercoat to the same level as the rest of the paintwork.

HEALTH AND SAFETY INFORMATION

This product contains no added lead. Avoid contact with skin or eyes. Keep out of reach of children. If accidently swallowed, seek medical advice immediately and show this container to the doctor. Dry sanding, flame cutting and/or welding of the dry paint film will give rise to dust and/or hazardous fumes.

If exposure cannot be avoided by the provision of local exhaust ventilation, suitable respiratory protective equipment should be used. Do not empty into drains or watercourses. Ensure good ventilation during application and drying. It is recommended to use suitable protective clothing and equipment. To avoid the risk of spillage, always store and transport containers in a secure upright position. Refer to Material Safety Data Sheet for complete information.
