TRAD EGG SHELL ENAMEL

PRODUCT USES

Highly recommended for plaster, metal and woodwork. Appropriate primers and undercoats must always be used, particularly on new work. Ideal for kitchens and bathrooms.

FEATURES AND BENEFITS

Exceptionally tough finish.
Scratch resistant.
Stain resistant.
Superb appearance with an even eggshell finish.

APPLICATION INFORMATION

Application conditions
Surface Temperature between 10°C – 35°C
Relative Humidity between 10% – 85 %

Application methods
Brush, Roller (short-nap mohair or foam), or airless spray

Thinner
Thinning not recommended
Ready for use after thorough stirring

Drying Time
Surface dry 4 hours
(Drying times will be extended during cold, wet or humid conditions)

Recoating Time
18 hours (overnight)

Cleaning of equipment
For clean up use Dulux Brush Cleaner/ Degreaser or Mineral Turpentine

Substrates
Suitable for cement plaster, gypsum plaster, concrete, fibre cement, PVC, galvanised iron, ferrous and wooden surfaces provided that appropriate preparation and priming is carried out.
APPLICATION INFORMATION

Precautions
Ensure that surfaces are sound and free from dust, dirt, grease and oil. Surfaces must be thoroughly dry - no more than 12% moisture content.
Do not apply during cold (below 10°C) or wet weather.
Do not apply directly to bare metal surfaces.
Recommended for interior surfaces only.
Not suitable for direct application to powdery or friable surfaces whether previously painted or not.

Coats Required
Apply two to three finishing coats to surfaces to achieve a closed film and solid colour.

SURFACE PREPARATION

NEW SURFACES
Cement Plaster (non friable), Gypsum Plaster, Composition Boarding, Fibre Cement
It is recommended that fresh plaster should be allowed one week drying for every 5mm thickness; and longer in cold or damp weather.
Spot-prime metal strips and nail heads with appropriate metal primer.
Prime with one coat of Dulux Trade Alkali Resistant Plaster Primer, followed by one coat of Dulux Trade Universal Undercoat.

Concrete
Remove any uncured cement, grease, and mould-release agents by high-pressure water blast, or wash with a strong solution of sugar soap. Rinse off thoroughly with clean water.
Prime with Dulux Trade Alkali Resistant Plaster Primer, followed by one coat of Dulux Trade Universal Undercoat.

Ferrous Surfaces
Inspect shop-primer thoroughly for damage by installation. All rust, scale and dirt must be removed by scraping or with steel wire brushes, and then sanded with medium grit sandpaper, finishing with fine grit sandpaper - down to a bright metal finish. Ensure that the sanded areas are dry and free of grease and dust. A solvent wash (rags dipped in lacquer thinner) may be used. Change the rags frequently. Allow drying. Prime with one or two coats Dulux Trade Steel Primer, depending on the severity of the condition (e.g. apply two coats at the coast), Follow with Dulux Trade Universal Undercoat.

Wooden Surfaces
Prime with Dulux Primer for Wood, followed by one coat Dulux Trade Universal Undercoat.

PREVIOUSLY PAINTED SURFACES
Ensure that surfaces are sound and free from dust, dirt, grease and oil. Surfaces must be thoroughly dry - no more than 12% moisture content.
Sand enamel surfaces to provide a key and improve adhesion.
Loose, flaking paint must be completely removed and bare areas spot primed with appropriate primer.
Build up bare patches with Universal Undercoat to the same level as the rest of the paintwork. It is always good painting practice to rub down existing surfaces with fine sandpaper to remove nubs and dirt particles. Rubbing down also provides a smooth surface for painting.
Mould instructions. To kill lichen and algae growth, scrub with one of the following solutions: either 25% chlorine solution and water or 25% bleach (sodium hypochlorite) and water solution. Ensure that the areas are completely saturated, and allow the solution to react for a minimum of 4 hours. Rinse the complete wall surface thoroughly with clean water.
Filling
Fill and repair imperfections with the appropriate Dulux Filler and prime with Dulux Trade Alkali Resistant Plaster Primer once the crack filler has dried properly. Failure to do this will result in uneven sheen levels between the repaired and normal areas. Apply one coat Universal Undercoat.

HEALTH AND SAFETY INFORMATION
For detailed safety information refer to Material Safety Data Sheet.
Keep out of reach of children.
Ensure good ventilation during application and drying.
Flash Point 37°C.

ADDITIONAL INFORMATION
Storage Conditions
Store under cool dry conditions.
Disclaimer
For best colour and sheen consistency, it is advisable to use containers of the same batch number, or to mix different batches together in a large container, or to finish in a corner before starting a new container.
